Smart VOC

FOR IMPROVED SAFETY

Smart VOC is an exclusive patent pending process that allows our clients to streamline their existing organisational competency framework so that it is easily and rapidly accessible for infield verification of competency (VOC).

It utilises Near Field Communication (NFC) technology on a user-friendly mobile software platform. This allows supervisors and safety advisors to quickly and accurately conduct field audits to determine if personnel are compliant and competent to perform specific tasks safely.

It also empowers employees or contractors to review their training records in the field to confirm their competencies prior to commencing a task.

How it works:

All employee or contractor training records and competencies are stored in a secure cloud based location. Individuals are assigned with their personal NFC wallet cards and NFC labels to attach to their hard hats.

Supervisors and safety personnel can read NFC tags with their smartphones to confirm the competencies of individuals on the frontline with minimal impact on productivity.

Smart VOC allows authorised personnel to instantly access an individual's training records such as current inductions, permits and equipment VOC's with the ability to display copies of licences or competency cards.

Benefits:

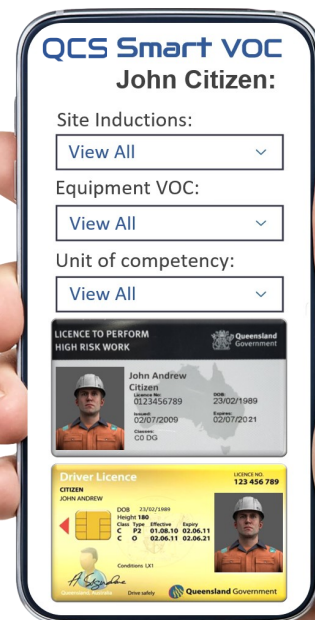

- Instant access to records of current competencies, training, inductions and licences
- Improve operational safety with quality field audits
- Supervisors & safety officers can instantly complete field audits to confirm workers have the required inductions, training and licences to perform tasks safely
- Provides greater accuracy during audits with real time updates
- Automatically notifies supervisors when training records are about to expire
- Access all LMS (learning management system) database records out in the field

Operational benefits:

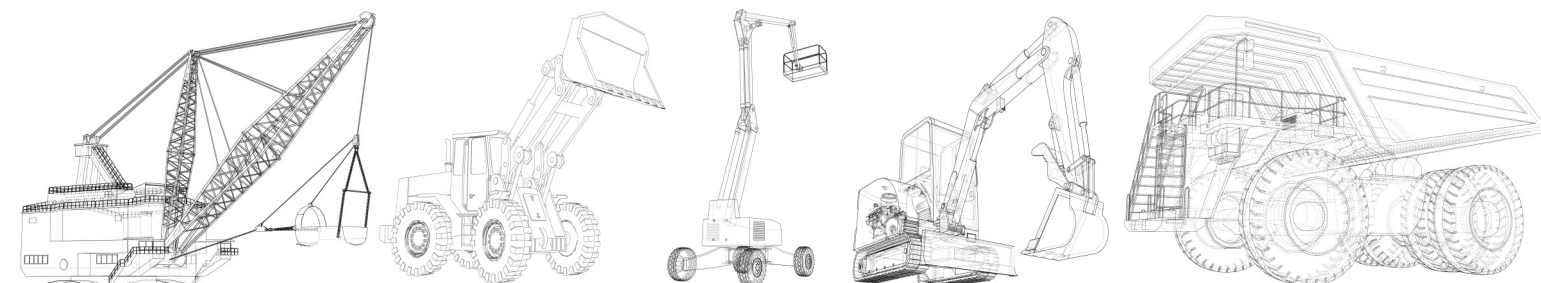

- Implementation is fast, easy and requires minimal training
- Tailored to comply with industry and company privacy policies
- Data is populated to a central dashboard with live updates and audit reports
- Eliminate time wasting to retrieve training records during field audits
- Customised to suit specific business requirements
- Reliable and cost-effective with low running costs
- Minimal hardware required accessible via smartphone
